

# State of the Mobile Web, April 2011

May 24, 2011

We live in social times. Never before have people been so interconnected in their private lives — sharing their ideas, opinions and media with friends and strangers alike. This month's State of the Mobile Web focuses how people use social media on mobile devices. We see that a significant portion of Opera Mini users choose to participate on social networks. Although each country has its own most popular social network, one commonality is that those who frequent such sites use them heavily, as seen in the page-view statistics described in the report.

Happy browsing!

Jon von Tetzchner,  
Co-founder, Opera Software

## Part 1: Measuring social network use in different countries

In this month's special highlight, we answer the following question: "In which countries do users browse social sites the most via their handsets?"

For each country, we regularly rank the top sites visited by Opera Mini users (based on the number of users visiting those sites). Social networking sites often rank highly on such lists. This month, however, we've gone a step further, looking at the percentage of users who visit such sites, and the percentage of page views being directed toward those sites.

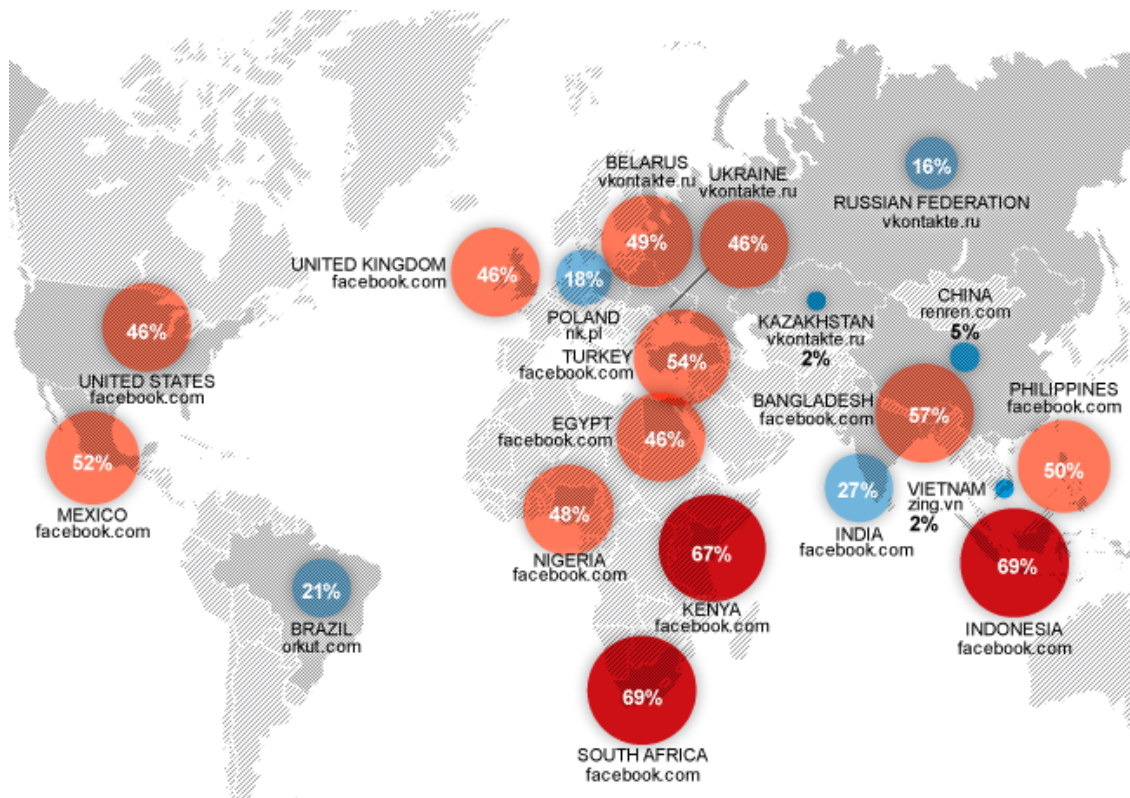

### Methodology

First, for the month of April 2011, we identified the top social network site in each of the top 20 countries. We then calculated the following:

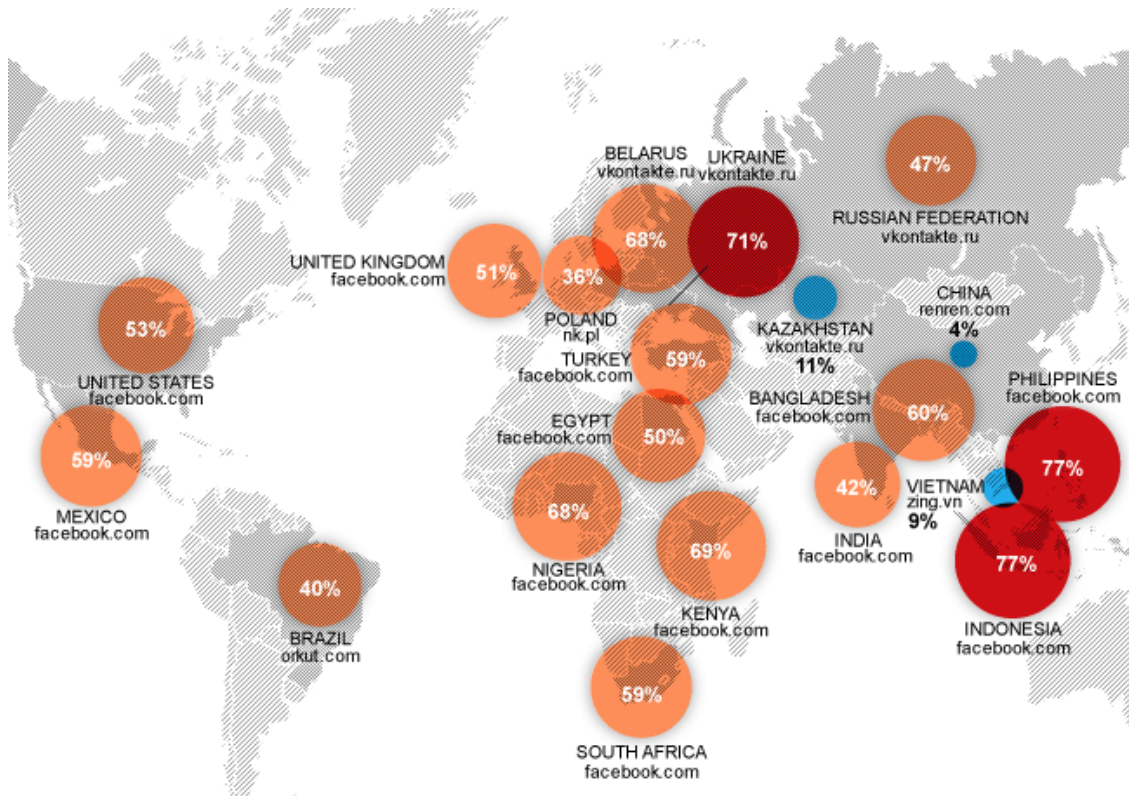

- the percentage of users in each country accessing the top social networking site in that country
- the percentage of each country's monthly page views being directed toward the most popular page visited on that country's top social networking site

The 20 countries were ranked according to social browsing page view percentage and social browsing user percentage.

### Social media dominates mobile web usage

Social media use per country as a percentage of overall mobile web traffic

Social media use per country as a percentage of overall users

## Highlights

- In terms of both usage and page views, Facebook is dominant, followed by Vkontakte and other sites more popular in Brazil, Poland, Vietnam and China.
- Facebook is used by more than 7 out of 10 users in the Phillipines and Indonesia. In Ukraine, more than 7 out of 10 users visit Vkontakte. In 12 out of the top 20 countries, Facebook (or Vkontakte in the case of Ukraine and Belarus) is used by over half the users in each country.
- Facebook page views in Opera Mini account for more than half of all page views in South Africa, Indonesia, Kenya, Bangladesh, Turkey, Mexico, and the Phillipines.
- Popularity in terms of usage is not always associated with very high page views. In Russia, for example, Vkontakte is used by 47.1% of mobile users but only accounts for 15.5% of all page views in Russia.
- China was difficult to examine because many of China’s popular portal sites contain social networking components. For the purpose of this analysis, we looked at Renren, which is similar to Facebook. Although only 4.2% of Chinese mobile users accessed Renren in April, and Renren page views only accounted for 4.9% of China’s total page views, Renren was at the top of the list of sites in China in terms of page views (and data transferred). This seems to indicate that there is a very large Long Tail of sites in China that receive a lot of page views.
- Facebook is extremely popular in Indonesia, both in terms of users (77% of all Indonesian Opera Mini users visited Facebook in April) and page views (Facebook accounts for 69% of all page views in Indonesia).

## Part 2: Growth

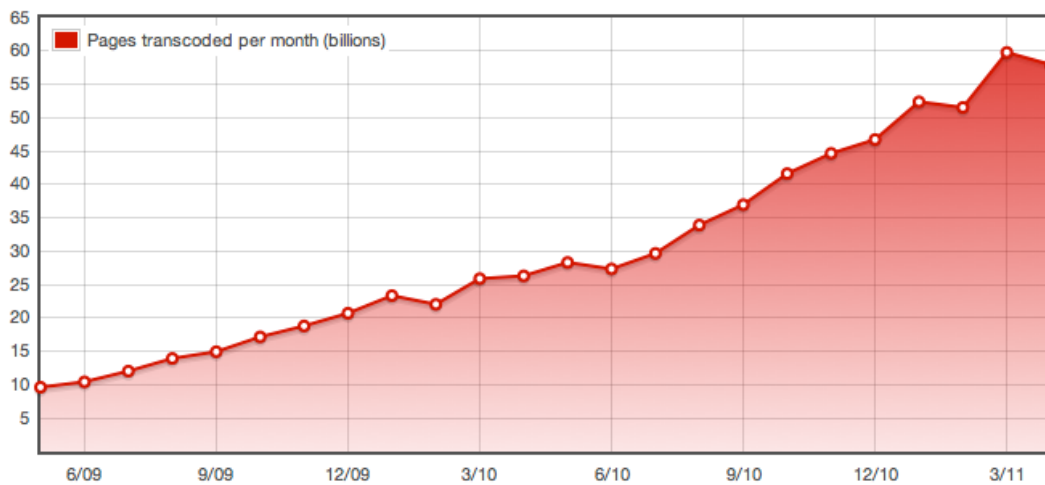

In April 2011, Opera Mini saw increases in unique users and data consumed. In all, 107.1 million people used Opera Mini in April, 57.9 billion pages were served, and 8.8 petabytes of operator data were compressed for Opera Mini users.

### Number of users

In April 2011, Opera Mini had over 107.1 million users, a 4.6% increase from March 2011. Since April 2010, the number of unique users has increased 81.8%.

### Pages transcoded

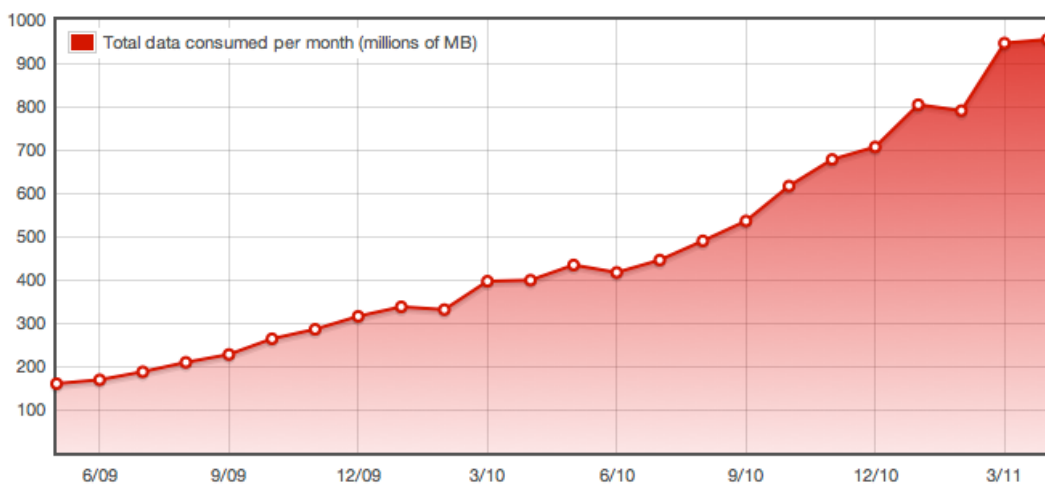

Opera Mini users viewed over 57.9 billion pages in April 2011. Since March, page views have gone down 3.1%. Since April 2010, page views have increased 120.2%.

Pages transcoded per month (billions)

### Data consumed

In April 2011, Opera Mini users generated over 954 million MB of data for operators worldwide. Since March, the data consumed went up by 0.9%. Data in Opera Mini is compressed up to 90%. If this data were uncompressed, Opera Mini users would have viewed over 8.8 petabytes of data in April. Since April 2010, data traffic is up 139.5%.

Total data consumed per month (millions of megabytes)

## Part 3: Country snapshots for April 2011

South Africa passed China in terms of total Opera Mini users in the month of April. Mexico leapt into the top 10, while the United States fell to number 11. Egypt, Turkey, Bangladesh and Kenya all went up in the ranking of top 20 countries.

### Snapshot: Russia

- Page-view growth since April 2010: 181.8 %
- Unique-user growth since April 2010: 45.3 %
- Data transfer growth since April 2010: 138.6 %
- Page-views per user: 882
- Data transferred per user (MB): 15
- Data transferred per page view (KB): 17
